INTRODUCTION

The main purpose of Tour and travels website is to provide a best facility and travelling services for a customer to book hotels, flight and bus ticket for trip purpose. I have developed tour and travels management system to provide a search platform find their tour places according to their choices. This is instead to provide the best traveling services to the customers and travel agents. I have expanded tours and travel administration strategy to provide an exploration platform where a tourist can find their trip spots according to their choices. This method further assists to promote reliable and fascinating tourism so that people can celebrate their vacations in their favourite places. This process also encourages to expanding tourism with different cultures, communities, so that they enhance the tourism experience, adventure, and build pride. I have created this system to establish and expand the structure of tourism that provides healthy interaction opportunities for tourists and natives and improves a Better awareness of different cultures, traditional lifestyles, traditional knowledge and moralities. This system moreover provides a better way to connect with various events. This system also provides trip-related information like which spots are tourist attractions, cities, and regions. Tourists can also fetch the Map and navigation system and climate information. This project is useful for tourists who are unfamiliar with the places where they want to visit. The application displays geographic-based data to the people shifting to the different cities and to the people who are ready to go on a journey.

PURPOSE

Tours & Travel website is an application will help in maintaining the operations performed related to sight-seeing and travelling. Most of the people in this world like to travel from one place to another no matter whether it is a small or large distance. Some people like to travel by train, flight, bus or by any other means of transport. The tours travel management system application is designed for the travel agency in which there is an option of doing the railway or air ticket reservation in order to reach the intended destination. The tours & travel management system application is one of the applications that will help the customers to book the air ticket or the railway tickets through this application of the travel agency. Booking of tickets will be done with a great ease and without any difficulty. This will be one of the interesting projects that one can work on and implement in real time world. The user interface must be simple and easy to understand.

CONCLUSION

A tour and travel website that can provide the users with the required tourism guidance required anytime and anywhere. This is a combination of smartphone and Internet services. The tour management website contributes a reasonable way for the users to schedule their trips, since it provides detailed information about the tourist places including description, image and map. This method includes various features/services such as delivering customised packages, the distance between the source and destination location, Google maps, online ticket booking, etc. This process achieves its main goal by pertaining to real-time data.
